Water Parks | RFID networked locks and cylinders - lockers & cashless integration

4 Room & Locker Keys: A Cashless Payment Method

The Power of SVN

The SALTO Virtual Network (SVN) is a unique combination of on-line and off-line stand alone readers with features that can only be matched by on-line systems that require an expensive Wi-Fi backbone or doors that are wired together. SALTO's SVN system does not require such infrastructures.

The door hardware is networked to your server without wires, infrared, or Wi-Fi. The link that enables communication is carried by the "intelligent" wristband which is a 2-way data transporter that grants access to rooms and common areas.

This data is captured at various "Hot-Spots" located in high traffic areas within the property. They upload and download information that defines user, staff and even contractor access. People simply "flash" their wristbands and continue with their routines while allowing for full control of all user access from a central station.

Auditing, access changes and even diagnostics of the locks are communicated to your computer without the need of physically going to the doors, lockers, and access points to gather the information.

Benefits

EFFICIENCY

- Cancel lost wristbands at the click of a button (eliminate walking with a programmer).
- Dynamic master keys: "on-the-fly" changes to user access privileges.
- Control the entire property right from your computer: rooms, game areas, restricted park areas, gyms and even lockers.

EFFECTIVENESS

- Monitor on-duty personnel and contractors: track facility maintenance tasks.
- The end of "my key doesn't work" situations. RFID wristbands cannot demagnetize.
- Custom reporting capabilities:
  - Staff/contractor timed activities
  - Former employees trying to access property
  - Non-scheduled access attempts

COST

- Off-line locks with on-line capabilities yet no wiring costs.
- Smart battery management: Locks with low battery levels will automatically send a notification to your computer.
- Don't sacrifice your budget or jeopardize security; control ALL access.
- Extreme abuse resistance extends lifespan of your locks.
- Salto electronic rental lockers use the same key.
- The RFID wristbands are a cashless payment method for your purchases.

RFID WRISTBAND ACCESS ADVANTAGE

A single system that allows you to integrate all Hotel Water Park Access as well as purchasing.

CASHLESS solutions
Access and purchases with a single wristband

By utilizing the latest in RFID, SALTO Systems is able to provide you with an RFID environment that allows your guests to not only open authorized doors with a wristband, but also allows them to make purchases throughout the property or rent a locker for the day. SALTO now helps you control all security at the water park and at the same time increase food and beverage sales opportunities due to the ease and convenience of wearing a wristband.

The SALTO RFID Solution does it all!
And not just for your guests

The SALTO access control system features streamline personnel management as well. Employees can be issued key fobs or cards that allow them to “clock in” when they arrive on the property and grants them access authorized areas. At the end of the day when staff clocks out, a “report card” is made available showing their activity throughout the day and it’s all archived in your computer.

Now you can manage and control ALL door access from your computer. When the wristband or key is presented at the lock, the event is stamped into the memory of the lock and the band’s.

The SALTO locks, cylinders and locker security can be installed in most existing doors and lockers. This saves thousands of dollars in renovation expenses without compromising security in your property.

Our access control software is customized specifically to your hotel water park needs and interfaces with most PMS and POS systems.
